ELIMINATE THE RISK OF FALLS WITH SAFETYDECK – THE FAST, LOW-COST SOLUTION

SAFETYDECK IS A FALL PREVENTION SYSTEM AND LIGHTWEIGHT ACCESS PLATFORM THAT PROTECTS SITE WORKERS FROM FALLS FROM HEIGHT. IT MEETS THE CURRENT HSE WORKING AT HEIGHT REGULATIONS.

The System

SafetyDeck can be adapted to suit most buildings irrespective of size or configuration and creates a temporary platform just below the working area.

The use of SafetyDeck will increase the installation rate of precast flooring systems, timber joists or roof trusses, as it provides a full, safe and unobtrusive working area, giving maximum freedom of movement.

SafetyDeck has been used successfully on sites nationwide for many years and it is currently the system of choice for many major developers and contractors.

With the system that sits at the top of the hierarchy of safety, you are meeting your obligations under the working at height regulations – **prevent that fall!**

Installation Service

Our experienced staff provide a professional service to all contracts. From the beginning of the project we can provide guidance on how SafetyDeck can be used to best advantage and provide you with all relevant cost information.

Supported by a network of installation teams, a full supply and erect service is provided. With no requirement to store materials on site, or use expensive or untrained site personnel to erect the system, this will save you time and money.

The decking system will be installed the day before the work at height operation commences and remain in place until the work is completed. A fully trained fixing team, all of whom are CSCS registered will install and remove the decking quickly and efficiently to suit your site programme.
