

Repair and reinstatement solutions

bituminous and cement based products

premium bituminous repair and reinstatement products for all types of openings in highways

RoadMaster™ SMA

A BBA/HAPAS approved permanent cold-lay reinstatement material for use on type 2, 3 and 4 carriageways.

RoadMaster SMA comes in rigid 25kg plastic tubs providing a single, optimum solution for the permanent, first-time reinstatement of openings in carriageways, footways, footpaths and cycle-lanes. It is a ready-to-use, stone mastic asphalt which has a long shelf-life, making it ideal for holding in stock

for emergency repairs or for 'out of hours' working. With roads increasingly being surfaced with stone mastic asphalt type materials, **RoadMaster SMA** provides an extremely durable and permanent reinstatement solution that matches the appearance of the existing carriageway.

PathMaster™

A BBA/HAPAS approved permanent cold-lay reinstatement material for use on footways and cycle tracks. Specially formulated for one-stop permanent reinstatements, **PathMaster** is manufactured using approved 6mm aggregate, at dedicated production units. The result is an exceptionally consistent product which, after compaction, is ready for immediate trafficking. **PathMaster** can be stored for up to 12 weeks, enabling emergency and 'out of hours' work to be undertaken in one visit, with any unused material restocked for later use, saving on raw materials and energy.

RepairMaster™

A pre-packed cold asphalt solution for repairing everything from a cracked asphalt or concrete surface to a full depth reinstatement. **RepairMaster** is fast and easy to use, enabling the smallest and most difficult repairs to be undertaken with minimum effort. The unique binder system used in **RepairMaster** guarantees a freeflowing, workable product, making it particularly suitable for pothole repairs and work around manhole covers, cats-eyes and gullies. **RepairMaster's** adhesive nature ensures a well-formed bond to carriageway ironwork, providing a long-lasting repair.

EdgeMaster

EdgeMaster is an emulsion-based bituminous aerosol, specially designed to complement **RoadMaster SMA**, **PathMaster** and **RepairMaster** repair and reinstatement products. Joint sealing with **EdgeMaster** bonds the new material to the existing surround and prevents the ingress of water into the excavation.

Cold-Lay Macadam

Ideal for carrying out quick repairs to driveways, car parks and footpaths. Suitable for use by contractors, builders and DIY enthusiasts alike, it requires neither previous experience of macadam nor specialist laying equipment.

Pre-Coated Chippings

Designed for carrying out patching and repair work to hot rolled asphalt surfaces. Handling pre-coated chippings has never been so clean and convenient. Ideally suited to use by local authorities, utilities and contractors, the range includes PSV grades to suit pathways, main roads, high-speed carriageways, trunk roads and motorways and comes in black on black and red on red.

high performance
cementitious products
that deliver **guaranteed**
strengths and setting times

RoadMaster™ Mortars

RoadMaster high early strength bedding mortars offer a single-bag solution for a variety of highway repair work. In addition to standard bedding mortars, the range includes rapid set mortars that can be opened to traffic after just 30 minutes and mortars that can be used in temperatures down to -20°C .

RoadMaster™ PQ-X Cement

An ultra rapid hardening cement for use in producing concrete for the rapid repair and replacement of concrete roads and airfield pavements where speed of completion is critical.

RoadMaster™ LTBCB

A quick setting, ultra rapid hardening, anti-shrinkage cement that is self-compacting and free-flowing. Typical uses include the installation of signposts and street furniture.

RoadMaster™ -AG 'Romag'

A high strength grout that can be applied to open textured macadam to create a durable pavement surface. The grout percolates through the macadam providing a composite topping with all the benefits of concrete and asphalt surfaces (summer and winter grades available).

RoadMaster™ Supapoint

Formulated for the pointing of stone setts, RoadMaster Supapoint is a high strength, shrinkage-compensated grout that can be used where a free-flowing grout is required to give a rapid return to service.

RoadMaster™ Concretes

A range of high strength and rapid setting concretes for the installation of street furniture, bedding applications and the repair of concrete, plus rapid hardening concretes for the fixing of lighting columns and road signs.

PointMaster

A range of pre-packed pressure pointing mortars for mechanical re-pointing that provide full joint penetration, in stone, concrete slabs or brickwork, in the most demanding situations. **PointMaster** mortar mixes are available in a choice of colours.

fast and **easy** to use bituminous and cementitious **highway maintenance solutions** for contractors, highway authorities and utility companies
